

BioCote®

SILVER Based Technology

THE LATEST IN ACTIVE MICROBIAL CONTROL

The innowave Chiller GF™ with UV, enhanced with BioCote® technology.

Natural anti-microbial control

Bacteria are a fact of life, however it is important to manage and control these levels and reduce them to a minimum. That is why innowave® is pleased to announce the addition of BioCote®, which offers continuous anti-microbial protection against bacteria, making innowave water treatment systems cleaner and safer.

What is BioCote® ?

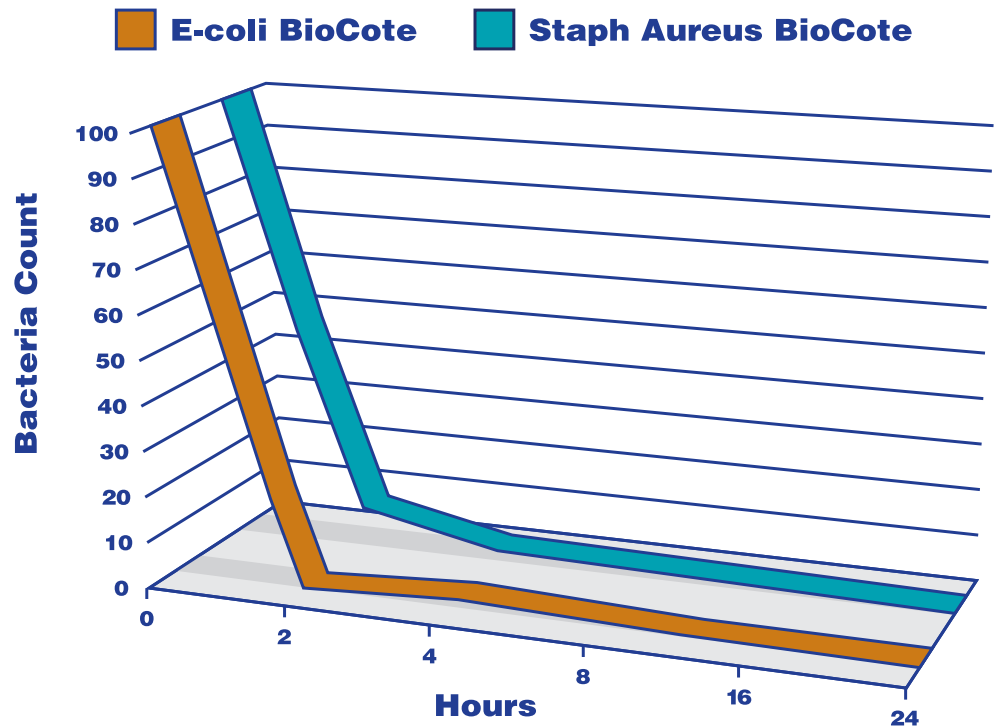

BioCote® is a unique anti-microbial agent, based on silver ion technology that inhibits the growth of a broad range of micro-organisms.

BioCote® is incorporated into innowave water treatment systems at the time of manufacture, giving them built-in, continuous anti-microbial protection against bacteria, mold and fungi, making them cleaner and safer.

BioCote® technology features:

- :: Economically engineered into products during the manufacturing stage
- :: Inhibits microbial growth that can cause unpleasant odors, degradation or deterioration
- :: Complements cleaning practices
- :: Helps keep products cleaner and safer

Reduction of bacterial counts on a BioCote® protected surface over a period of 24 hours.

BioCote®

SILVER Based Technology

THE LATEST IN ACTIVE BACTERIAL CONTROL

Why BioCote® ?

BioCote® is a safe, effective antimicrobial technology that does not wear off or leach.

How is it applied?

BioCote® powder coating incorporates a silver-based antimicrobial agent within the manufacturing process so that all powder coated surfaces will have antimicrobial properties.

Is BioCote® safe?

Silver is a safe, natural, yet powerful anti-microbial that has been used for many centuries for its abilities to aid preservation. BioCote's innovative technology utilizes the power of silver and incorporates it into products, giving them anti-microbial properties.

Durability and effectiveness

BioCote® does not change the look or feel of products, instead it protects surfaces, 24 hours a day, against bacteria, mold and fungi. BioCote® will not wear out or rub off products over time, making it effective for the lifetime of any product. Accelerated life-cycle tests have shown no significant reduction in the anti-microbial efficacy of products protected by BioCote®.

Does BioCote® rub off over time?

BioCote® will not break down or leach out of products and has very low toxic effects, providing a natural alternative to synthetic, organic chemicals.

Is BioCote® effective against antibiotic resistant bacteria?

Silver does not function in the same way as antibiotics, therefore, there is no known evidence to suggest that bacteria are resistant to it.

The Highest Standards

Innowave's goal is to provide water treatment systems that meet the highest standards and provide the safest drinking water. By utilizing a combination of modern water treatment technologies, innowave® water treatment systems consistently provide high quality drinking water.
